

RBAC definition

- Task 4 deliverable (Poorvi Bagga)

Role-Based Access Control (RBAC) is a security model that defines access control rules within the system, allowing users to access resources in a controlled manner through predefined roles. These roles provide users with access to resources in accordance with their responsibilities.

Roles -

- User
- Researcher
- Healthcare Provider
- Administrator

User

- Create personal accounts.
- Verify Your Email Account & Two-Factor Authentication (2FA) Setup
- Submit your personal health information using forms.
- View and update your personal health goals.
- Access to Dashboards and Health Summaries.
- Compare personal data to aggregates for the given cohort.
- System notifications and feedback from healthcare providers.

Researcher

- Register and verify research-level accounts.
- Develop anonymous and aggregated reports for community health trends.
- Expanding export of aggregated data in CSV.
- Add, update, or modify forms for health data collection (subject to approval by the administration for major modifications).
- Ability to Create and Manage "Cohorts" for Report Purposes.
- Maintain the data structures of research databases through the use of controlled system interfaces.

Healthcare Provider

- Account registration and activation through organizational credentials, verifying the license.
- Enable two-factor authentication for account security.
- Access authorized patient-specific health data.
- Provide a graphical report for a specified group or an individual participant.
- Provide personalized feedback to users.
- All data access and report generation activities are logged in the audit system.

Administrator

- Create and manage administrator-level accounts.
- Approve user, researcher, and healthcare provider accounts.
- Monitoring system activities and audit logs for export.
- Removing problem reports.
- Perform database backup and restoration.
- Approving substantial changes in a form or system by a researcher.
- Always maintain overall governance, security, and integrity.
